

Soil-applied herbicide programs for weed control in corn. Urbana, Illinois, 2003. Maxwell, Douglas J., Christy L. Sprague, and Aaron G. Hager. The objective of this research was to evaluate soil-applied herbicide programs for weed control in corn. The study was established at the Crop Sciences Research and Education Center, Urbana. The soil was an Elburn silt loam with a pH of 6.6 and 4.7% organic matter. Pioneer 33Y09 corn was planted 2 inches deep on April 23 in 30 inch rows. Treatments were arranged in randomized complete blocks with three replications of plots 7.5 by 30 feet. Herbicides were applied with a CO<sub>2</sub> backpack sprayer delivering 20 gpa and equipped with 8003 flat fan nozzles. Application information is listed below:

Date	April 22	April 23
Application	ppi	pre
Temperature (F)		
Air	56	63
Soil	54	61
Soil Moisture	Moist	Moist
Wind (mph)	7-NE	3-N
Sky Cover (%)	0	0
Precip. after application		
Week 1 (inch)	0.72	0.72
Week 2 (inch)	1.31	1.48
Relative humidity (%)	30	30

There was no crop injury observed from any of the treatments. Giant foxtail, common lambsquarters, and Pennsylvania smartweed control at 30 days after treatment (DAT) was greater than 90% for all treatments. All treatments containing either mesotrione, isoxaflutole, or flumetsulam and clopyralid provided 90 % or greater velvetleaf control 30 DAT. Tall morningglory control 30 DAT was similar to that of velvetleaf, but lower in general. All treatments gave greater than 90% control of giant foxtail 60 DAT except isoxaflutole and atrazine at 0.07 lb/A and 1.5 lb/A, and S-metolachlor plus atrazine plus mesotrione and CGA-154281 at 1.67 lb/A plus 0.624 lb/A plus 0.166 lb/A. Common lambsquarters were greater than 90% controlled at 60 DAT by all treatments. Pennsylvania smartweed control at 60 DAT was similar to the 30 DAT rating - excellent for products containing mesotrione, isoxaflutole, or flumetsulam and clopyralid. Tall morningglory control was greater than 90% for only one treatment, 1.67 lb/A S-metolachlor plus 0.624 lb/A atrazine plus 0.166 lb/A mesotrione and CGA-154281, plus 1.0 lb/A simazine. (Dept. of Crop Sciences, University of Illinois, Urbana).

Table. Soil-applied herbicide programs for weed control in corn. Urbana, Illinois, 2003. (Maxwell, Sprague, and Hager).
