Abbreviations for Herbicide Common Names

The abbreviations listed below have been established by the NCWSS for common names of herbicides, herbicide safeners, and other herbicide-modifying chemicals for which common names have been assigned. Abbreviations only should be used in tables and figures to save space. Authors are encouraged to spell common names wherever possible and must use the full name of each herbicide at least once in each table. When abbreviations are used, they must either conform to this NCWSS approved list or they must be footnoted. New abbreviations will be assigned as new common names are approved.

The & symbol also shall be employed when designating the inclusion within a package mix of substances other than the active ingredients (i.e. acetochlor plus dichlormid becomes acet&dcmid). Package mix products (consisting of 2 or more active ingredients blended by the manufacturer into one product) shall be abbreviated by placing the "&" symbol between the abbreviations of the active ingredients. For example, the package mix of chlorimuron plus thifensulfuron shall be abbreviated "clim&thif". The & symbol is to be avoided for all other uses. Tank mix combinations shall use the + symbol. The / symbol shall be used to indicate a time gap between different treatments applied to the same plot. For example: Trifluralin (PPI) / Bentazon (POST).
